

GreenLeaf PowerCell 10 Home Battery - Technical Specification

The PowerCell 10 is a lithium iron phosphate (LiFePO₄) home battery produced by GreenLeaf Energy.

It has a nominal capacity of 10 kilowatt-hours and a usable capacity of 9.2 kilowatt-hours.

The PowerCell 10 delivers a maximum continuous power of 5 kilowatts.

Its round-trip efficiency is 94 percent.

GreenLeaf provides a 10 year warranty on the PowerCell 10.

The battery is compatible with the SunMax 400 solar panel and can be stacked in multiples for larger storage needs.

Enclosure rating is IP55 for indoor or covered outdoor walls. Nominal voltage is 48 volts. The internal inverter is hybrid and supports a 200 amp pass-through. Operating temperature is 0 to 45 degrees Celsius while charging.

Do not confuse the PowerCell 10 with the PowerCell 15. The 15 uses a different cell chemistry, a longer warranty, and is sized for the SunMax 370, not the SunMax 400. Firmware, floor stands, and backup interface kits are SKU-specific.

Commissioning requires a licensed electrician. The battery ships at 30 percent state of charge. Floor loading is 95 kilograms. Noise is under 35 dBA. A Wi-Fi and Ethernet gateway reports state of charge to the GreenLeaf app.
