

GreenLeaf PowerCell 15 Home Battery - Technical Specification

The PowerCell 15 is a nickel manganese cobalt (NMC) home battery produced by GreenLeaf Energy for larger homes.

It has a nominal capacity of 15 kilowatt-hours and a usable capacity of 13.8 kilowatt-hours.

The PowerCell 15 delivers a maximum continuous power of 7 kilowatts.

Its round-trip efficiency is 92 percent, two points below the PowerCell 10.

GreenLeaf provides a 12 year warranty on the PowerCell 15, which is longer than the PowerCell 10 warranty but applies only to this SKU.

The PowerCell 15 is compatible with the SunMax 370 solar panel. It is not the recommended pairing for the SunMax 400.

Nominal voltage is 48 volts. Floor loading is 118 kilograms. The unit is IP54. Charging is limited below 5 degrees Celsius. Stacking is limited to two cabinets on a single gateway.

NMC cells require a tighter thermal envelope than LiFePO4. The manual forbids installing a PowerCell 15 on the same backup bus as a PowerCell 10. Spare parts, contactors, and BMS firmware differ.
