

GreenLeaf SunMax 370 Solar Panel - Product Guide

The SunMax 370 is GreenLeaf's value residential module. It uses polycrystalline silicon cells rather than the monocrystalline cells in the SunMax 400.

The SunMax 370 has a rated power output of 370 watts and a module efficiency of 19.8 percent.

Each panel weighs 19.4 kilograms and measures 1.65 meters by 1.0 meters.

GreenLeaf backs the SunMax 370 with a 20 year performance warranty, which is five years shorter than the SunMax 400 warranty.

The SunMax 370 is designed to pair with the GreenLeaf PowerCell 15 home battery, not the PowerCell 10.

Operating temperature is minus 35 degrees Celsius to 80 degrees Celsius. Frame colour is silver. Pallet quantity is 32 modules. IEC 61215 certification applies. Maximum system voltage is 1000 volts DC. Annual degradation is 0.55 percent per year.

Installers sometimes mix 370 and 400 watt modules on one roof; GreenLeaf does not support mixed-SKU strings. The 370 uses a 30 millimetre frame, so it does not share rails with the SunMax 400.

Replacement glass, junction-box lids, and MC4 pigtails are unique part numbers. Ordering the 400-watt spare kit for a 370 array will fail incoming inspection.
